

ELSEVIER

Comput. Methods Appl. Mech. Engrg. 143 (1997) 427–428

**Computer methods  
in applied  
mechanics and  
engineering**

## Contents Volume 143

### Volume 143, Nos. 1–2, 15 April 1997

- A new finite element with 'drilling' D.O.F.  
*C. Chinosi, M.I. Comodi and G. Sacchi* 1
- High-order boundary conditions and finite elements for infinite domains  
*D. Givoli, I. Patlashenko and J.B. Keller* 13
- The quadrilateral 'Mini' finite element for the Stokes problem  
*W. Bai* 41
- A finite element formulation for incompressible flow problems using a generalized streamline operator  
*M.A. Cruchaga and E. Oñate* 49
- An exact model reduction procedure for mechanical systems  
*S.L. Chen and M. Géradin* 69
- Numerical analysis of the modified EVSS method  
*M. Fortin, R. Guénette and R. Pierre* 79
- A domain decomposition approach for heterogeneous time-harmonic Maxwell equations  
*A. Alonso and A. Valli* 97
- Moving least-square reproducing kernel methods (I) Methodology and convergence  
*W.-K. Liu, S. Li and T. Belytschko* 113
- Nonlinear analysis of laminates through a mindlin-type shear deformable shallow shell element  
*A. Barut, E. Madenci and A. Tessler* 155
- Shape-memory alloys: modelling and numerical simulations of the finite-strain superelastic behavior  
*F. Auricchio and R.L. Taylor* 175
- Call for papers 195

### Volume 143, Nos. 3–4, 30 April 1997

- On the constitutive modeling and finite element computation of rate-dependent frictional sliding in large deformations  
*T.A. Laursen and V.G. Oancea* 197
- A method for contact problems using virtual elements  
*W.R.C. Underhill, M.A. Dokainish and G.Æ. Oravas* 229

Evolution of plastic anisotropy for high-strain-rate computations <i>S.K. Schiffrl and P.J. Maudlin</i>	249
On discrete projection methods for the incompressible Navier–Stokes equations: an algorithmical approach <i>S. Turek</i>	271
Linearizing convection terms in the Navier–Stokes equations <i>B.M. DeBlois</i>	289
$C^1$ -Continuous stress recovery in finite element analysis <i>H.R. Riggs, A. Tessler and H. Chu</i>	299
Equal-order interpolations: a unified approach to stabilize the incompressible and advective effects <i>M. Storti, N. Nigro and S. Idelsohn</i>	317
A fractional four-step finite element formulation of the unsteady incompressible Navier–Stokes equations using SUPG and linear equal-order element methods <i>H.G. Choi, H. Choi and J.Y. Yoo</i>	333
A monotone finite element method with test space of Legendre polynomials <i>T.W.H. Sheu, S.F. Tsai and M.M.T. Wang</i>	349
A finite element formulation for the Stokes problem allowing equal velocity–pressure interpolation <i>R. Codina and J. Blasco</i>	373
Energy preserving/decaying schemes for non-linear beam dynamics using the helicoidal approximation <i>C.L. Bottasso and M. Borri</i>	393
